-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 29 October 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1,3-9 and 11-14 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1,3-9 and 11-14 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
Paper No(s)/Mail Date _____.
- 4) ☐ Interview Summary (PTO-413)
Paper No(s)/Mail Date. _____.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: _____.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1, 3-9, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent #6,473,102 (Rodden et al), in view of US patent #6,581,020 (Buote et al).

- As for claims 1, 6, 7: Rodden et al (herein Rodden) teach a computer implemented method and corresponding system for displaying a graphical window on a display screen having a screen resolution, comprising the steps/means for:

determining, for the window, whether a display size and display screen position are specified for the window (1:58-59, 2:14-17, 4:32-42), and

if the size and position are specified, rendering the window at the specified size and position so that the window is not automatically maximized (1:59 – 2:11. See also description of figure 4),

if the size and position are not specified, determining the screen resolution for the display screen,

automatically and inversely changing the size of a display window responsive to changing the screen resolution (1:22-28; 3:62-66),

Rodden fails to clearly teach the comparing the screen resolution against a pre-determined threshold value; and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value.

However, in the same field of window layout, Buote et al teach the comparing screen resolution against a pre-determined threshold value and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value (Buote's 11:15-21). It would have been obvious to one of skill in the art, at the time the invention was made, to combine Buote's teaching to Rodden for automatically maximizing the window at a predetermined resolution threshold. Motivation of the combining is to predefine the window size to avoid the lost of information (i.e., the window become larger than the display screen). The steps/means for determining the screen resolution for the display screen is inherently included in Buote's teaching of resolution threshold.

- As for claim 3. Per Rodden, the user may control the size and position of selected windows so that the windows will not be automatically maximized due to the change in resolution (1:28-31; 4:32-42).
- As for claim 5: Per Buote, the predetermined threshold value is 800 pixels by 600 pixels (11:15-21).
- As for claims 4, 11: It is inherently included in Rodden's teaching of window that the window include a sizing button for reducing (thus restoring) the size of the window by a pre-determined amount. Even if it is not, Official notice is taken that implementation of

the window sizing button is well known, and would have been obvious to one of skill in the art for controlling the size of the window.

- As for claims 8, 12-14: Rodden et al (herein Rodden) teach a computer implemented method and corresponding system for displaying a graphical window on a display screen having a screen resolution, comprising the steps/means for:

determining, for the window, whether a display size and display screen position are specified for the window (1:58-59, 2:14-17, 4:32-42), and

if the size and position are specified, rendering the window at the specified size and position so that the window is not automatically maximized (1:59 – 2:11. See also description of figure 4),

if the size and position are not specified, determining the screen resolution for the display screen,

automatically and inversely changing the size of a display window responsive to changing the screen resolution (1:22-28; 3:62-66).

Rodden fails to clearly teach the comparing the screen resolution against a pre-determined threshold value; and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value.

However, in the same field of window layout, Buote et al teach the comparing screen resolution against a pre-determined threshold value and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value (Buote's 11:15-21). It would have been obvious to one of skill in the art, at the time the invention was made, to combine Buote's teaching to

Rodden for automatically maximizing the window at a predetermined resolution threshold. Motivation of the combining is to predefine the window size to avoid the lost of information (i.e., the window become larger than the display screen). The steps/means for determining the screen resolution for the display screen is inherently included in Boute's teaching of resolution threshold. Per Rodden, the user may control the size and position of selected windows so that the windows will not be automatically maximized due to the change in resolution (1:28-31; 4:32-42).

- As for claim 9: It is inherently included in Rodden that the creating step is performed through an application programming interface call, and wherein said determining step is performed by monitoring the application programming interface call (3:25-39).

3. Claims 1, 3-9, 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over US patent application publication 2003/0076340 (Hatori et al), in view of US patent #6,581,020 (Buote et al).

- As for claims 1, 6, 7: Hatori et al (herein Hatori) teach a computer implemented method and corresponding system for displaying a graphical window on a display screen having a screen resolution, comprising the steps/means for:
determining, for the window, whether a display size and display screen position are specified for the window (0009-0013, 0039, 0043), and
if the size and position are specified, rendering the window at the specified size and position so that the window is not automatically maximized (0038, 0079-0081),

if the size and position are not specified, determining the screen resolution for the display screen,

automatically and inversely changing the size of a display window responsive to changing the screen resolution (0005-0008, 0040),

Hatori fails to clearly teach the comparing the screen resolution against a pre-determined threshold value; and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value. However, in the same field of window layout, Buote et al teach the comparing screen resolution against a pre-determined threshold value and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value (Buote's 11:15-21). It would have been obvious to one of skill in the art, at the time the invention was made, to combine Buote's teaching to Hatori for automatically maximizing the window at a predetermined resolution threshold.

Motivation of the combining is to predefine the window size to avoid the lost of information (i.e., the window become larger than the display screen). The steps/means for determining the screen resolution for the display screen is inherently included in Buote's teaching of resolution threshold.

- As for claim 3. Per Hatori, the user may control the size and position of selected windows so that the windows will not be automatically maximized due to the change in resolution (0009-0013, 0039, 0043).
- As for claim 5: Per Buote, the predetermined threshold value is 800 pixels by 600 pixels (11:15-21).

- As for claims 4, 11: The size of the window can be restored responsive to a user touch input (0081). It is noted that Hatori teaches a touch input rather than a button as recited. However implementation of a restored button is well known and would have been obvious to one of skill in the art. Furthermore, It is inherently included in Hatori's teaching of window that the window includes a sizing button for reducing (thus restoring) the size of the window by a pre-determined amount. Even if it is not, Official notice is taken that implementation of the window sizing button is well known, and would have been obvious to one of skill in the art for controlling the size of the window.

- As for claims 8, 12-14: Hatori et al (herein Hatori) teach a computer implemented method and corresponding system for displaying a graphical window on a display screen having a screen resolution, comprising the steps/means for:

determining, for the window, whether a display size and display screen position are specified for the window (0009-0013, 0039, 0043), and

if the size and position are specified, rendering the window at the specified size and position so that the window is not automatically maximized (0038, 0079-0081),

if the size and position are not specified, determining the screen resolution for the display screen,

automatically and inversely changing the size of a display window responsive to changing the screen resolution (0005-0008, 0040).

Hatori fails to clearly teach the comparing the screen resolution against a pre-determined threshold value; and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value. However, in

Art Unit: 2179

the same field of window layout, Buote et al teach the comparing screen resolution against a pre-determined threshold value and automatically maximizing the size of the window on the display screen if the screen resolution is below the pre-determined threshold value (Buote's 11:15-21). It would have been obvious to one of skill in the art, at the time the invention was made, to combine Buote's teaching to Hatori for automatically maximizing the window at a predetermined resolution threshold. Motivation of the combining is to predefine the window size to avoid the lost of information (i.e., the window become larger than the display screen). The steps/means for determining the screen resolution for the display screen is inherently included in Boute's teaching of resolution threshold. Per Hatori, the user may control the size and position of selected windows so that the windows will not be automatically maximized due to the change in resolution (0009-0013, 0039, 0043).

- As for claim 9: It is inherently included in Hatori that the creating step is performed through an application programming interface call, and wherein said determining step is performed by monitoring the application programming interface call (0044-0047).

Response to Arguments

Applicant's arguments filed 10/29/04 have been fully considered but they are not persuasive.

REMARKS:

In response to the argument that Rodden does not teach the step determining the size and position of a window is specified, the limitation is disclosed in 1:58-59; 4:32-47 wherein the user

Art Unit: 2179

may selectively specifies certain windows to be displayed at specified size and position after resolution change.

In response to the argument that the combined Rodden and Buote do not teach the comparing the current resolution with a threshold resolution, this limitation is disclosed by Buote in 11:15-21. The determination of current resolution is inherently included in the comparing step. Buote as combined with Rodden allows the selectively retaining and maximizing windows responsive to resolution change.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
